

1. What is the overall churn rate?

Churn Rate % =

DIVIDE(
 [Churned Customers],
 [Total Customers],
 0
)

result:

- Total customers = **3,000**
- Churned customers = **549**
- Churn rate = **18.30%**

The overall customer churn rate is 18.30%, meaning that approximately 18 out of every 100 customers have churned from the company.

2. Which contract type has the highest churn?

Churn Rate by Contract — Bar Chart

Y-axis → Contract

X-axis → Churn Rate %

Look at the bar with the **highest percentage**. We can see in powerbi visual

For the dataset we created, the **Month-to-month** contract has the highest churn rate.

3. Which payment method has the highest churn?

Churn Rate by Payment Method

Y-axis → Payment_Method

X-axis → Churn Rate %

Look for the highest bar.

For our dataset, the payment method with the highest churn is:

Electronic check

4. Which internet service has the highest churn?

Churn Rate by Internet Service

Y-axis → Internet_Service

X-axis → Churn Rate %

Look at the highest bar.

For our dataset, the highest churn is associated with:

Fiber optic

Again, this shows an **association**, not necessarily a cause.

5. Does tenure appear related to churn?

This question requires you to compare **tenure and churn**.

Use these visuals:

Visual 1

Customer Count by Tenure Group

Visual 2

Tenure vs Monthly Charges — Scatter Chart

You can also analyze churn by tenure group.

Your tenure groups are:

0–12 Months

13–24 Months

25–48 Months

49–72 Months

Generally, if customers with **shorter tenure** show higher churn rates, then you can say there appears to be a relationship.

For our generated dataset, churn probability was intentionally higher among newer customers.

6. Are higher monthly charges associated with churn?

Monthly Charges by Churn

Your visual contains:

Churn = No

Churn = Yes

and:

Average Monthly Charges

Compare the two bars.

If the Yes bar is higher, then churned customers have higher average monthly charges.

For our dataset, this is the pattern we designed into the data.

7. Which customer segment has the highest churn?

This is a more advanced question.

A **customer segment** means a particular combination/group of characteristics.

For example:

Month-to-month

+

Fiber optic

+

Electronic check

+

Short tenure

could represent a high-risk segment.

You can use your charts and slicers to identify combinations.

In Power BI

Try:

Contract → Month-to-month

Then:

Internet Service → Fiber optic

Then:

Payment Method → Electronic check

Then look at your **Churn Rate % KPI**.

You can experiment with different combinations.

8. What factors appear associated with customer churn?

Now combine your previous findings.

Your important factors include:

Contract

Month-to-month customers show higher churn.

Payment Method

Electronic check customers show higher churn.

Internet Service

Fiber optic customers show higher churn.

Tenure

Shorter-tenure customers show greater churn tendency.

Monthly Charges

Higher monthly charges are associated with higher churn.

Senior Citizen

You can compare:

Senior Citizen = Yes

Senior Citizen = No

using a Power BI slicer or additional chart.

Services

You can also examine:

- Online Security
- Online Backup
- Device Protection
- Tech Support
- Streaming services

9. Which customer segment requires attention?

This is where you turn your analysis into a **business recommendation**.

Based on your analysis, focus on:

Short-tenure + Month-to-month customers

Especially those with:

- Fiber optic service
- Electronic check payment
- Higher monthly charges

10. Write 5–10 key business insights

This is simply a summary of your most important findings.

You can put **7 or 8 insights** in your report.

Example for your project:

Key Business Insights

1. **Overall churn:** The overall churn rate is **18.30%**, indicating that a meaningful portion of the customer base is leaving the company.
2. **Contract:** Month-to-month customers show the **highest churn rate**, suggesting that customers without long-term contracts may require additional retention efforts.
3. **Payment method:** Customers using **electronic check** have the highest churn rate among the payment methods.
4. **Internet service:** **Fiber optic** customers show the highest churn rate among the internet service categories.
5. **Tenure:** Customers with **shorter tenure** show a greater tendency to churn compared with longer-tenure customers.
6. **Monthly charges:** Higher monthly charges are associated with increased churn in this dataset.
7. **High-risk segment:** Newer customers with **month-to-month contracts**, particularly those using fiber optic service and electronic check payment, represent an important segment for retention efforts.
8. **Retention strategy:** The company could focus on early-stage customer engagement, targeted offers, contract upgrades, service support, and personalized retention campaigns.
